

Don't Let Your Microsoft Software Assurance Vouchers Expire. Redeem them with J4 Systems.

Packaged Services provides structured planning services from Microsoft partners to help you lower the cost and complexity of deploying new software and can help you maximize the value of your existing software.

Consulting engagements are held on customers' premises and result in a high-level deployment plan that incorporates best practices derived from Microsoft Consulting Services and qualified partner engagements. Packaged Services offers the following different types of consulting engagements:

- **Desktop Deployment Planning Services**
- **SharePoint Deployment Planning Services**
- **Exchange Deployment Planning Services**

Desktop Deployment Planning Services

Desktop Deployment Planning Services (DDPS) can help your organization deploy Microsoft Office or Windows software to improve productivity across your organization. J4 Systems will collaborate with you to create a comprehensive deployment plan that includes analysis, business case, process, and technical procedures.

The service is based on the Solution Accelerator for Business Desktop Deployment and best practices from Microsoft. The objective is to help reduce the cost and complexity associated with high levels of process and automation. The number of engagement days is determined by your SA coverage.

SharePoint Deployment Planning Services

SharePoint Deployment Planning Services (SDPS) is designed to help your organization plan an effective deployment of Microsoft SharePoint. SDPS includes a broad range of planning services – SharePoint 2010 Deployment Planning, SharePoint 2010 Upgrade Planning and SharePoint for Internet Sites Planning – that help you optimize the effectiveness of SharePoint capabilities, lower the cost of deployment, and improve the productivity of your organization. J4 Systems will guide you through a highly effective planning process using best practices for getting more out of your SharePoint investment. The number of engagement days determined by your SA coverage.

Exchange Deployment Planning Services

Exchange Deployment Planning Services (EDPS) can help your organization evaluate and plan your Microsoft Exchange Server or Microsoft Office Communications Server implementation whether in the cloud or on premise. EDPS can help cover the cost of services and activities that can help you understand why and how to implement Microsoft Unified Communications solution.

J4 Systems can help you by:

Showing the value of Microsoft Unified Communication solution and building a business case document through a Business Value Assessment or an architectural design session

Defining organizational needs and prerequisites to inform a customized Unified Communications solutions design

Test driving the solution through a proof of concept or supplying guidance for demonstrations and/or lab experiences

The recommended length of EDPS engagement may vary based on the scope of effort, however, the number of engagement days is determined by your SA coverage.

How can I use Training Vouchers to get more Packaged Services Days?

You can increase the number of engagement days by converting unused Software Assurance Training Voucher days into Packaged Services days on a three-to-one basis (three Training Voucher days equal one Packaged Service day). J4 Systems can manage this conversion using the Volume Licensing Service Center. **To get started contact J4 Systems today at 866.547.9783**
