DataCore SANmelody Administration: During this 3 day course, every major feature of SANmelody is reviewed in depth by lecture, presentation and labs offering a great hands-on learning experience in the world's leading storage array and storage virtualization software.

Each student will use SANmelody to virtualize storage, allocate storage to an application server, implement high availability configurations and manage the SAN environment.

On completion of this course, students will be able to:

- Create and present linear and NMV virtual volumes
- Utilize storage-level snapshots
- Synchronous mirrors
- Asynchronous IP Mirroring (AIM)

Register by calling [866.547.9783](tel:866.547.9783)
